

**June 4, 2014**

## Roadside rain garden construction to begin on your block as early as June 19

**Sorry we missed you!** King County staff are in your neighborhood today to talk with residents on the two blocks circled in red on the map at left. These two blocks – originally scheduled for 2015 construction – will be constructed this summer. Here's why:

- King County's contractor, Goodfellow Bros., Inc., is ahead of schedule and will be able to finish roadside rain gardens on your block this construction season
- Constructing these two blocks this year will complete 34<sup>th</sup> Avenue Southwest this year instead of extending the construction season through 2015
- **Work will begin as early as Thursday, June 19. You will receive advance notification with more details about what to expect with at least 7 days' notice.**

### About the Barton CSO Control Project

King County is installing roadside rain gardens to divert stormwater runoff away from the combined sewer system. Once in the rain gardens, storm water will filter through soil to a drain pipe, which will take the water to a deep well where the water will slowly soak in deep underground. Keeping storm water out of the sewer system will reduce combined sewer overflows in Puget Sound during storms. The roadside rain gardens will be located in the planter strip between the curb and sidewalk.
